About Me

Hi, my name is Nívio, a full-stack developer studying software development for about **five years** with **two years of experience**. I've already worked on building web sites, web apps, mobile apps, APIs and scripts to automate boring work processes. I hope we can work together!

Projects

Hand Detector

Python project that I made to apply the knowledge that I received from online courses. The hand detector has three modes: count fingers, volume controller and object moving. All three use the base code to detect the hand.

User Interface Prototype

This is a React Native project that I made as a way to start studying UX / UI in mobile apps. I used styled-components for the project styling.
