Summary

Full-stack developer with expertise in front-end and mobile development. I also work as an UI Designer when needed, so I can ensure the best UI practices in the software.

I work always focusing on ensuring a clean, scalable and maintainable code at the same time with a beautiful interface for the user to have the best experience.

Adept at collaborating with cross-functional teams to deliver high-quality software solutions.

Professional Experiences

Full-stack developer at Bruning Sistemas
Santa Catarina, Brazil (hybrid); Feb 2020 - May 2021

Bruning Sistemas is a Brazilian information technology (IT) company that provides websites, CMS software and applications with the aim of facilitating day-to-day business and boosting its customers' sales.
- I was responsible for creating new features and maintaining the company's application made in Ionic with Angular.
- Helped colleagues in the support team when necessary to solve a problem reported by customers.
- I was responsible for running the company's legacy application made in Ionic on all the developers' computers and created documentation with a step-by-step guide on how to configure the environment and also a guide to good mobile development practices.
- I created three projects from scratch with React and React Native that were part of a new software made available by the company to its customers.

Technologies: Angular, Ionic, React, React Native, Node, MySQL.

Front-end developer at Vialaser Depilação
Santa Catarina, Brazil (hybrid); May 2021 - Current position

Vialaser Depilação is a Brazilian beauty company that offers its customers laser hair removal at an affordable price and for all types of skin tones.
- I develop new features and maintain the company's software, such as e-commerce and applications, with more than 100,000 interactions per day.
- I create interface designers in Figma when requested to meet the proposed solution.
- I make daily calls with the development team to monitor the team's task board and the current priority of each demand together.

- I created a project from scratch with React in order to facilitate the inspection of the company's units carried out by the unit coordinators.
- I am responsible for releasing new updates to the app, both on the Play Store and the App Store.

Technologies: React, React Native, Node, Postgres, Figma, Jira-software.

Freelancer
Santa Catarina, Brazil (remote);

As a freelancer, I was responsible for creating new features with React in the software of the company that hired me. The main feature was to cluster a map that when approximated shows more details of each indicator.

Technologies: React, Figma.

Education

CEDUP Diomício Freitas
Internet IT Technician, Web Development; Santa Catarina, Brazil; Jan 2018 - Dec 2020

CEDUP Diomício Freitas is a technical school affiliated with the state education system in Santa Catarina, Brazil, which offers a variety of vocational training courses.

During the course of my three-year program, I gained a comprehensive understanding of computer programming fundamentals, including algorithms. With a focus on web development, I acquired knowledge about the workings of the internet, including the Hypertext Transfer Protocol (HTTP). Additionally, I received instruction in the utilization of relational databases and other related topics.
